Web Technology based Internship Report

Submitted in accordance with the requirement for the degree of **Bsc(MSCS),2rd year, 4th sem internship**

Name of the College	: Pragathi Degree College
Department	: Computer Science
Name of the Faculty Guide	: G.Venkata lakshmi
Duration of the Internship	: 2 months
Internship Starting Date	: 12th September 2022
Internship Ending Date	: 12th November 2022
No. of Working Days	: 53 Days
Programme of Study	: Online Examination System
Year of Study	: 2022 2rd Year
Academic Year	: 2022
Date of Submission	: 13th November 2022

PRAGATHI DEGRE COLLEGE

Acknowledgment

We have taken efforts in this project; however, it would not have been possible without the kind Support and help of many individuals and organization. We would like to extend our sincere thanks to all of them.

We are also thankful to **Sri.G.S RAMA KRISHNA garu, M.A, B.Ed**. honorable Principal of Pragathi Degree College ,Tanuku and I express my sincere gratitude and deep sense of respect for making me available with all the required assistance and for his support and inspiration to carry out this thesis in the Institute.

We are also thankful to the coordinator **Smt.G.Venkata lakshmi ,MCA** for her encouragement and cooperation to complete this thesis in time.

We are highly to our guide **Dr. K.SAI MANOJ garu, D.Sc, Ph. D, (EEPM - ISB), M.Tech, B.Tech, C.Eng**. for his guidance and constant supervision as Well as for providing necessary information regarding the project & also for the support in completing the project. I would like to express my gratitude towards our parents and members of"**INNOGEECKS TECHNOLOGIES**" for their kind cooperation and encouragement which helped me in completion of this project. I am thankful to and fortunate enough to get constant encouragement, support and guidance from all INNOGEECKS TEAM.

PRAGATHI DEGREE COLLEGE

Self-Assessment

We are here to complete our project: ONLINE EXAMINATION SYSTEM. In this project we developed a website which is useful for students.

We used HTML programming language for creating our frontend pages and for backend we Use Python. In Python we use a web framework Flask for backend operations. We use MYSQL to store the data in the database and retrieve the data when we want.

As a whole, we are very satisfied with our work; it has bought us a lot of knowledge And experience. This internship was worth doing and we able to enrich our skills in many aspects. We are sure that the work we have done will be of good use in future.

PRAGATHI DEGREE COLLEGE

1. INTRODUCTION

Welcome to our web-based online examination system! Our platform offers a modern and efficient way to conduct online exams, providing a seamless experience for both exam administrators and participants. Whether you're an educational institution, a certification body, or a corporate organization, our system provides a robust and reliable solution to manage and administer online exams.

Our web-based online examination system simplifies the entire exam process, from exam creation and scheduling to result generation and analysis. It eliminates the need for manual paper-based exams, saving time, reducing administrative overhead, and providing a convenient and secure environment for exam takers.

Key Features of Our Web-Based Online Examination System:

1. Exam Creation and Customization: Create exams with various question formats such as multiple-choice, true/false, essay, and more. Customize the exam settings, including time limits, difficulty levels, and randomization of questions.

2. Secure Exam Environment: Our system ensures the integrity and security of exams by implementing features such as timed exams, random question orders, and the prevention of cheating through IP tracking and browser lockdown.

3. User-Friendly Interface: The platform offers a user-friendly interface for exam participants, making it easy to navigate through the exam, answer questions, and submit responses.

4. Automated Grading: The system automates the grading process for objective-type questions, saving time and providing instant feedback to participants.

5. Result Generation and Analysis: Generate comprehensive exam results and reports for individual participants or groups. Analyze exam performance through detailed statistics, including average scores, question difficulty analysis, and performance comparisons.

6. Flexible Exam Scheduling: Set up exam schedules based on your requirements, allowing participants to take exams at their convenience within the specified timeframe.

7. Accessibility and Multilingual Support: Our system supports accessibility features, ensuring an inclusive exam experience for participants with disabilities. It also provides multilingual support, allowing exams to be conducted in different languages.

8. Integration and Scalability: Seamlessly integrate our online examination system with existing learning management systems (LMS) or other educational platforms. The system is scalable, accommodating a large number of exam takers simultaneously.

9. Data Security and Privacy: We prioritize the security and privacy of exam data, implementing robust encryption protocols and ensuring compliance with data protection regulations.

PRAGATHI DEGREE COLLEGE

1.1. ABSTRACT

The web-based online examination system is a comprehensive solution designed to streamline and simplify the process of conducting examinations online. It provides a secure and efficient platform for administering and managing online exams, eliminating the need for traditional paper-based exams.

This system allows educational institutions, organizations, and businesses to create and deliver online exams to a large number of participants simultaneously, regardless of geographical location. Participants can access the exams conveniently from their own devices, such as computers or tablets, through a web browser.

The online examination system offers a range of features to ensure a seamless and robust examination experience. It allows exam administrators to create diverse question types, including multiple-choice, true/false, fill in the blanks, and essay questions. Additionally, the system supports various exam formats, such as timed exams, practice exams, and customizable assessments.

Security is a top priority, and the system incorporates measures to prevent cheating and maintain exam integrity. It includes features like randomized question ordering, question shuffling, and timer controls to minimize the possibility of cheating. It may also employ techniques such as IP restriction, browser lockdown, and remote proctoring for additional security.

The system provides automatic grading functionality, significantly reducing the time and effort required for evaluating exams. Results are calculated instantly, allowing participants to receive immediate feedback on their performance. Detailed reports and analytics provide administrators with valuable insights into exam results, question difficulty levels, and overall performance statistics.

Furthermore, the online examination system offers seamless integration with Learning Management Systems (LMS) or educational platforms, enabling synchronization of user data, course information, and exam results.

Overall, the web-based online examination system revolutionizes the examination process by providing a convenient, secure, and efficient way to conduct online exams. It enhances flexibility, accessibility, and scalability while minimizing administrative burdens and ensuring the integrity of the examination process.

PRAGATHI DEGREE COLLEGE

1.2. Project Objectives

1. Automation: Develop an automated system to streamline the process of conducting examinations online. Eliminate manual tasks such as paper-based test creation, distribution, and grading.
2. Accessibility and Convenience: Create a web-based platform that enables students to access exams from any location with an internet connection. Provide a user-friendly interface that allows easy navigation and interaction during the exam.
3. Security: Implement robust security measures to ensure the integrity and confidentiality of examination data. Prevent unauthorized access, cheating, and data breaches to maintain a fair and secure testing environment.
4. Customization and Flexibility: Design a system that allows administrators to create and customize exams according to specific subjects, courses, or levels of difficulty. Enable flexibility in question formats, such as multiple-choice, essay, or fill-in-the-blank questions.
5. Time Management: Incorporate features that allow administrators to set time limits for exams, ensuring adherence to the allocated duration. Notify students of remaining time and automatically submit exams upon completion.
6. Randomization and Variation: Implement question randomization to minimize cheating and maintain test integrity. Provide the ability to create question banks and select questions randomly for each student, reducing the likelihood of shared answers.
7. Immediate Feedback: Enable instant feedback and scoring upon completion of the exam. Provide students with detailed results, including correct answers and explanations, to enhance learning and understanding.
8. Performance Analytics: Generate comprehensive reports and analytics on student performance, including overall scores, section-wise analysis, and comparative analysis. Help educators identify strengths, weaknesses, and areas for improvement in the learning process.
9. System Integration: Integrate the online examination system with existing learning management systems (LMS) or educational platforms, allowing seamless synchronization of user data, course information, and exam results.
10. Scalability and Reliability: Build a scalable system capable of handling a large number of concurrent users without performance degradation. Ensure high availability and reliability to minimize disruptions during exam periods.
11. User Support and Administration: Provide comprehensive documentation and user support to ensure smooth adoption and usage of the system. Develop administrative tools to manage exams, student accounts, and monitor system performance.

PRAGATHI DEGREE COLLEGE

1.3. Project Outcomes

1. Enhanced Accessibility: By developing a web-based online examination system, you provide increased accessibility to participants. Students can take exams from any location with an internet connection, eliminating the need for physical exam centers.
2. Streamlined Exam Administration: The online examination system simplifies exam administration processes. It allows for easy creation and management of exam questions, automatic grading of multiple-choice questions, and efficient generation of exam reports.
3. Time and Cost Savings: With an online examination system, you eliminate the costs associated with printing exam papers, distributing them to exam centers, and manual grading of exams. This leads to significant time and cost savings for educational institutions or organizations conducting exams.
4. Flexibility in Exam Scheduling: The system enables flexible scheduling of exams, accommodating various time zones and allowing participants to choose convenient exam slots. It reduces scheduling conflicts and provides flexibility for both exam administrators and participants.
5. Instant Feedback and Results: Online examination systems provide immediate feedback and results to participants upon exam completion. This quick turnaround time enhances the overall exam experience and allows participants to receive timely feedback on their performance.
6. Enhanced Security: Online examination systems incorporate security measures to ensure the integrity and confidentiality of exams. Features like randomized question order, timed exams, and secure login mechanisms help prevent cheating and maintain the fairness of the exam process.
7. Comprehensive Reporting and Analytics: The system offers comprehensive reporting and analytics capabilities, allowing exam administrators to analyze exam results, identify trends, and gain insights into participant performance. This information can be used for further improvements in curriculum design and teaching methodologies.
8. Scalability and Adaptability: Web-based online examination systems are scalable and adaptable to accommodate a large number of participants and different types of exams. They can handle simultaneous exams for multiple subjects or courses, making them suitable for both educational institutions and recruitment agencies.
9. Integration with Learning Management Systems: The online examination system can integrate with existing learning management systems (LMS) or educational platforms, providing a seamless user experience for participants and streamlining the overall learning and assessment process.
10. Improved Efficiency and Accuracy: By automating the exam administration and grading process, the online examination system improves efficiency and accuracy. It reduces manual errors and ensures consistent and reliable grading criteria.

PRAGATHI DEGREE COLLEGE

1.4. PROJECT SCOPE

1. Introduction: Develop a web-based online examination system that allows users to create, administer, and take online exams. The system will provide a user-friendly interface for exam creation, management, and result analysis.
2. User Roles:
    - Administrator: Responsible for managing the system, creating exams, and generating reports.
    - Instructor: Creates and manages exams, assigns them to students, and reviews results.
    - Student: Takes exams, submits answers, and views exam results.
3. Functional Requirements:

    a. User Registration and Authentication:
    - Users can register and create accounts with appropriate roles.
    - Authentication mechanisms ensure secure access to the system.

    b. Exam Creation and Management:
    - Instructors can create exams with various question types (multiple-choice, true/false, etc.).
    - Exams can have time limits, multiple sections, and weighted marking schemes.
    - Question banks allow instructors to store and reuse questions.

    c. Exam Assignment and Enrollment:
    - Instructors can assign exams to specific students or groups.
    - Students can enroll in available exams and receive notifications.

    d. Exam Taking:
    - Students can access assigned exams and view instructions.
    - The system enforces time limits and submission deadlines.
    - Students can save partial answers and review them before final submission.

    e. Grading and Result Analysis:
    - Automatic grading of objective-type questions based on predefined answer keys.
    - Manual grading for subjective-type questions.
    - Real-time calculation of exam scores and generation of result reports.
    - Performance analysis, including individual and class-level statistics.

    Security and Integrity:
    - Implement security measures to prevent cheating, such as randomizing question orders and limiting navigation.
    - Ensure data integrity and confidentiality through secure data storage and transmission.

PRAGATHI DEGREE COLLEGE

4. Non-Functional Requirements: a. User-Friendly Interface:
    - Intuitive and responsive interface for easy navigation and interaction.
    - Clear instructions and guidance for exam taking and result viewing.

    b. Scalability and Performance:
    - The system should handle a large number of concurrent users without performance degradation.
    - Efficient database design and optimization techniques to ensure smooth operation.

    c. Compatibility:
    - Cross-browser and cross-platform compatibility to support a wide range of devices.

    d. Maintenance and Support:
    - Easy system maintenance and updates.
    - Provide documentation and support resources for system administrators, instructors, and students.
5. Future Enhancements:
    - Integration with learning management systems (LMS).
    - Support for multimedia content in questions.
    - Advanced analytics and data visualization for detailed result analysis.
    - Support for multiple languages.

1.4.1. SWOT ANALYSIS

Strengths:

Convenience and Accessibility: Web-based online examination systems offer the advantage of convenience and accessibility. Students can take exams remotely from any location, reducing the need for physical examination centers and providing flexibility in scheduling.

Automated Assessment: Online examination systems automate the assessment process, eliminating the need for manual evaluation. This reduces the burden on instructors and ensures faster and more accurate grading.

Time and Cost Efficiency: Conducting exams online saves time and resources compared to traditional paper-based exams. It eliminates the need for printing, distribution, and manual grading, resulting in cost savings and increased efficiency.

Security Measures: Web-based online examination systems can implement robust security measures to prevent cheating or unauthorized access. Features such as timed exams, randomized question order, and secure login mechanisms enhance the integrity of the assessment process.

Weaknesses:

PRAGATHI DEGREE COLLEGE

Technical Challenges: Online examination systems rely on stable internet connections and suitable hardware devices. Technical issues such as connectivity problems or hardware malfunctions can disrupt the exam-taking experience and cause inconvenience for students.

Cheating Prevention: While security measures can be implemented, there is always a risk of cheating in online exams. Students may find ways to circumvent security measures, such as using external resources or collaboration with others during exams.

Opportunities:

Scalability: Web-based online examination systems have the potential for scalability, allowing institutions to accommodate a larger number of students without physical space limitations. This opens up opportunities for reaching a broader audience and expanding educational offerings.

Customization and Adaptability: Online examination systems can be customized to meet the specific needs of different educational institutions or organizations. They can adapt to various types of exams, including multiple-choice, essay-based, or interactive assessments, providing flexibility in assessment methods.

Threats:

Infrastructure Challenges: Online examination systems heavily rely on stable internet connectivity and robust server infrastructure. Technical issues, network outages, or system failures can disrupt the examination process and impact the user experience.

Data Security Risks: Storing and handling sensitive student data within an online examination system poses data security risks. Breaches, hacking attempts, or unauthorized access to the system can compromise student data and raise concerns about privacy and confidentiality.

User Adoption and Training: Introducing a web-based online examination system may require training and support for instructors and students who are unfamiliar with the platform. Resistance to change or lack of technical skills could hinder the successful adoption and utilization of the system.

PRAGATHI DEGREE COLLEGE

1.5. TECHNICAL/ OPERATIONA APROACH

Building a web-based online examination system involves several technical considerations. Here's a high-leveloverview of the technical approach you can take to develop such a system:

1. Requirements Analysis:
    - Understand the requirements of the online examination system, including the types of questions, exam formats, time limits, grading criteria, and user roles.
2. System Design:
    - Design the overall system architecture, including the front-end (user interface), back-end (server-side logic), and database components.
    - Choose appropriate technologies and frameworks for each component, such as HTML/CSS for the front-end, a server-side language/framework like flask with, and a relational database system like MySQL or PostgreSQL for data storage.
3. User Authentication and Authorization:
    - Implement user authentication to allow users to register, log in, and manage their accounts.
    - Define different user roles such as administrators, instructors, and students, and assign appropriate permissions to each role.
4. Database Design:
    - Design the database schema to store information about exams, questions, answers, user profiles, and exam results.
    - Define appropriate relationships and constraints between the database tables.
5. Exam Creation and Management:
    - Provide an interface for administrators or instructors to create and manage exams.
    - Implement features to define exam parameters such as time limits, question banks, randomization, and scoring criteria.
6. Question Types and Exam Formats:
    - Implement different types of questions such as multiple-choice, true/false, fill in the blanks, and descriptive questions.
    - Support various exam formats like timed exams, untimed exams, and adaptive exams.
7. Exam Taking:
    - Create an interface for students to take exams online.
    - Implement features like timer management, navigation between questions, and saving partial answers.
8. Grading and Results:
    - Implement an automated grading system to evaluate exam submissions.
    - Calculate scores, provide feedback, and generate result reports for both administrators and students.
9. Security and Integrity:
    - Implement security measures to prevent cheating and ensure the integrity of the exam process.
    - Consider techniques like randomizing question orders, shuffling answer choices, and using secure connections (HTTPS).
10. Testing and Deployment:
    - Thoroughly test the system to ensure its functionality, performance, and security.
    - Deploy the system on a web server or a cloud platform, making it accessible to users over the internet.
11. Ongoing Maintenance and Enhancements:
    - Continuously monitor and maintain the system, addressing any issues or bugs that arise.
    - Gather user feedback and make improvements based on user needs and evolving requirements.

PRAGATHI DEGREE COLLEGE

2. SYSTEM REQUIREMENTS

System requirements are a statement that identifies the functionality that is needed by a system in order to satisfy the customer's requirements. System requirements are a broad and also narrow subject that could be implemented to many items.

2.1. Software Requirements

A Software requirements specification (SRS) document describes the intended purpose, requirements, and nature of software/application/ online food mapping to be developed. To prepare an SRS document, you would need to have a functional knowledge or application, knowledge of software/hardware/technology to be used. Software requirements for online food mapping management system are Html and CSS

2.2. Hardware Requirements

The hardware requirements are the requirements of a hardware device. Most hardware only has operating system requirements or compatibility. For example, a printer may be compatible with Windows XP but not compatible with newer versions of Windows like Windows 10, Linux, or the Apple maces Hardware requirements for This system provides an easy solution for customers to buy the online food mapping system

PRAGATHI DEGREE COLLEGE

3. FEASIBILITY STUDY

The purpose of this feasibility study is to assess the viability and potential benefits of implementing a web-based online examination system. This study aims to evaluate the technical, economic, operational, and scheduling feasibility of such a system and provide insights into its potential impact on stakeholders and the organization.

1. Technical Feasibility: The technical feasibility examines the organization's ability to develop, implement, and maintain a web-based online examination system. Considerations include the availability of necessary infrastructure, technologies, and expertise. Key points to evaluate are:

- Assessment of existing hardware and software infrastructure.
- Evaluation of the required technical skills and expertise.
- Compatibility of the system with different web browsers and platforms.
- Integration with existing systems, databases, and security measures.

2. Economic Feasibility: The economic feasibility assesses the financial viability of implementing the web-based online examination system. Key aspects to consider are:

- Estimation of development and implementation costs, including hardware, software, and licensing fees.
- Evaluation of ongoing maintenance and support costs.
- Assessment of potential cost savings compared to traditional paper-based examination processes, such as reduced printing and administrative expenses.
- Calculation of the return on investment (ROI) and cost-benefit analysis.

3. Operational Feasibility: The operational feasibility evaluates the practicality and effectiveness of implementing the web-based online examination system within the organization. Key factors to consider are:

- Assessment of organizational readiness and willingness to adopt an online examination system.
- Analysis of potential benefits and challenges from the perspective of administrators, instructors, and students.
- Evaluation of the system's usability, user interface, and accessibility for diverse user groups.
- Identification of training needs for administrators, instructors, and students.

PRAGATHI DEGREE COLLEGE

4. Scheduling Feasibility: The scheduling feasibility focuses on the timeline and resources required for the development and implementation of the web-based online examination system. Key considerations include:

- Estimation of the development timeline, including planning, design, development, testing, and deployment phases.
- Assessment of resource availability, including human resources, budget, and infrastructure.
- Evaluation of any potential risks and mitigation strategies.
- Alignment with existing organizational priorities and strategic objectives.

PRAGATHI DEGREE COLLEGE

4. THE PROJECT PLAN

Initiation: defines project goals and objectives .It also is when feasibility is considered, along with how to measure project objectives

Planning: A set out the project scope .It establishes what tasks need to get done and who will dothem motion and augmented.

Monitoring and management: Performance & control occur during the execution phase and maybe considered part of the same step. This phase ensures that the project is going according to plan.

Closing and review: Project close is the final Contracts are closed out and given to the client. Successes and failures are evaluated.

4.1. SCHEDULE AND ESTIMATION: -

Conclusion:-

10years ago, we didn,,t know what Integra was, much less about shopping on social networks. Technologies are developing and sometimes it seems that people have to adapt for life with them. But this is not the case.

PRAGATHI DEGRE

Technologyhelps us meet our needs. So why not use them to live at your pleasure, help yourself save money and time, and moreover earn more money?

To finish this task, you need a strong cooperation between team. Estimating time accurately when planning and coordinating events is a key skill every event planner must learn. It ensures clients are not surprised with overspend and should ensure profits are maximized. Unfortunately, estimating event planning and coordination time is not an exact science and luck does play its part. However, by implementing the following simple strategies an event planner should be able to ensure time, and therefore cost, estimates are c yourself

Lists are key. Use an Excel sheet, a Trello board, Evernote or a simple notebook to list EVERYTHING that needs to be done by EVERYBODY you are responsible for which will affect your budget and time management. Any charges by 3rd party suppliers must be detailed in your invoice to the client unless otherwise instructed by the client. Site visits, AV testing and rehearsal times are examples that should be included so you know how long each supplier needs to undertake their job successfully and can account forthat in the final cost estimations. You don,,t want to undercharge for the event time but overcharging and having an event set up well in advance of the actual date is wasteful and counterproductive.

PRAGATHI DEGREE COLLEGE

Factor in the unexpected:-

No matter how hard you try to plan the detail, there will inevitably be something unexpected that will require additional time. Factor this in when you do your castings. You cannot invoice and plan every minuteof every day so make sure that you have a small buffer in your time planning to cater for it.

Your customer doesn,,t need (or want) to know how much time each part of your event build takes. You, asthe event planner should have all of the components listed, estimated timings set and after the event, the actual timings. This will aid you in future events (see point 7. below) and is extremely important.

Your client on the other hand will just want an overview of the various categories and will want to see if youcame in on budget or not. One of your tasks as an event planner is to reduce your clients stress and work load. Bygrouping together and categorizing certain elements it makes for much easier reading and analysis.

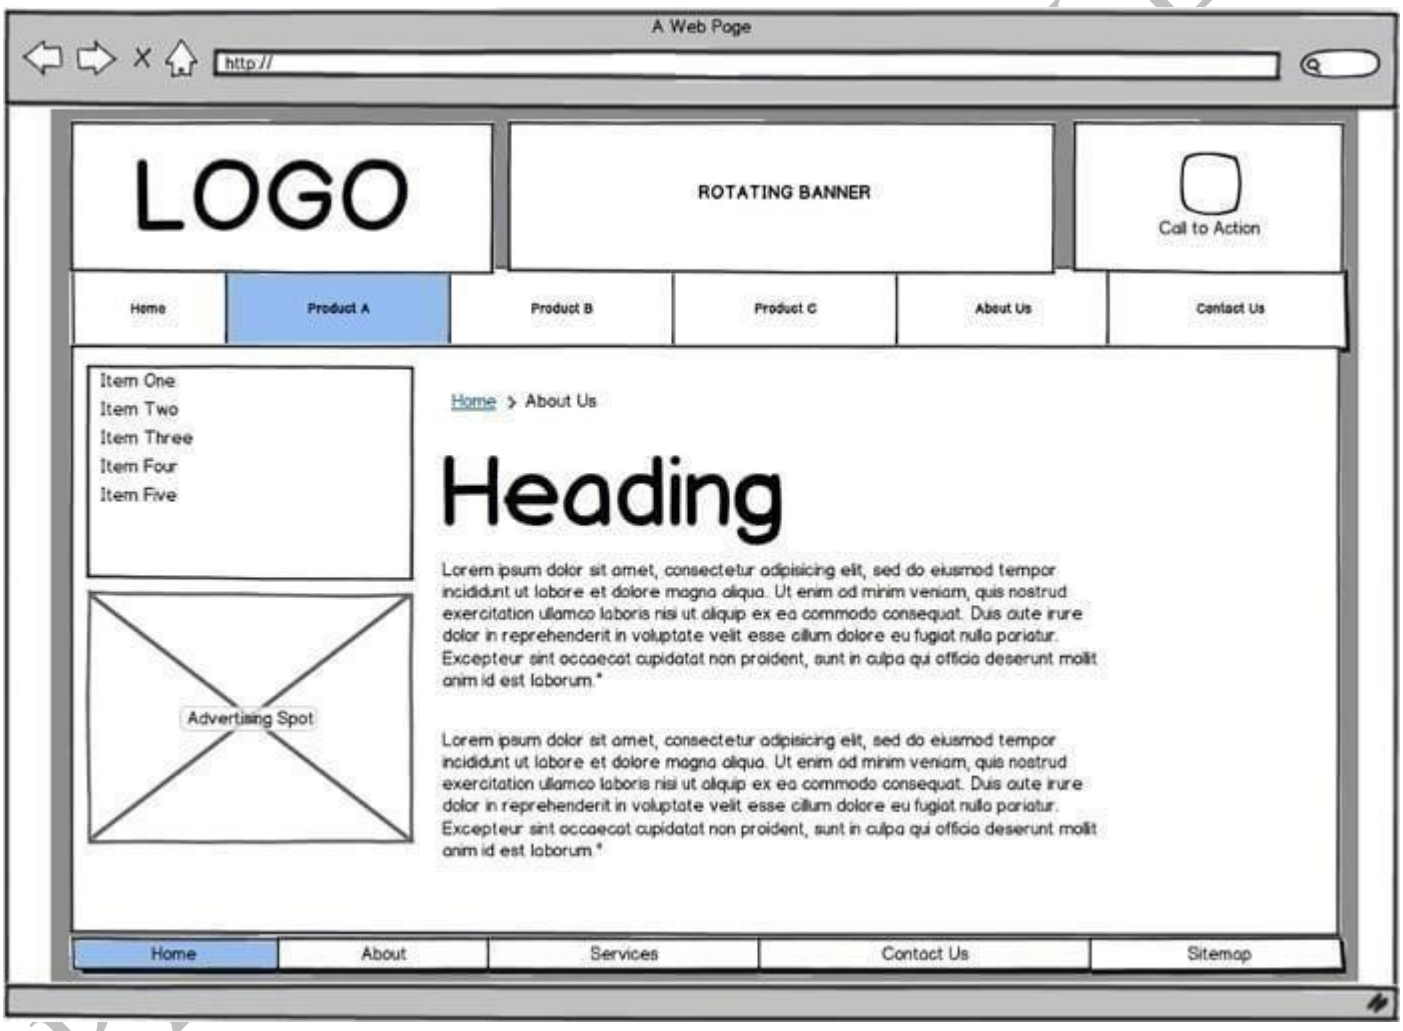
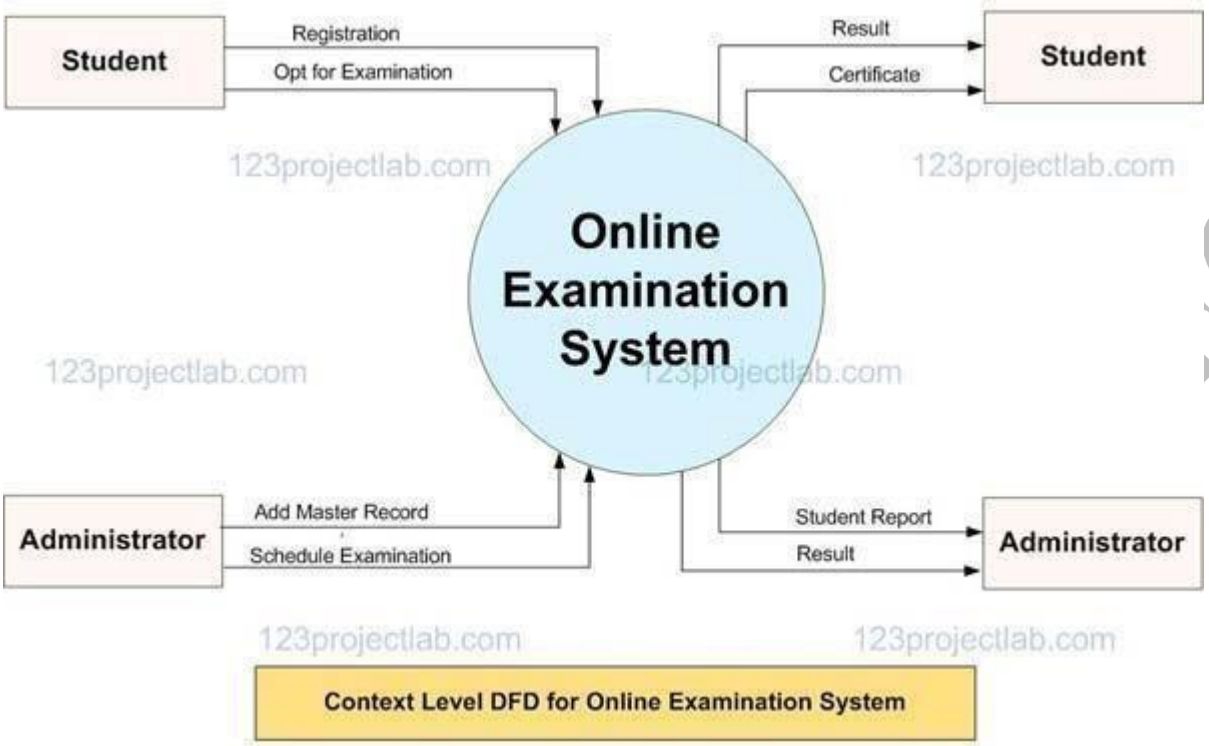
5. Design Document

5.1. Wire frame diagram:

Wire Framing is a productive tool that can be used to create visually compelling and realistic models of commercially available phones, tablets, screens and web pages. The diagrams assist Business Analysts, Experience Designers and others to communicate with buyers, allowing them to demonstrate the solution interfaces.



5.2. Architecture diagram



Context Level DFD for Online Examination System

Architecture is a coherent set of concepts for a structure. These concepts are often visualized atfour levels of abstraction .These are:

- Conceptual Level-showing an over view of concepts
- Implementation Level-showing the vendors and products with whichthe components will be implemented.
- All the visualizations on this page are logical level architecture diagrams. Most often an architecturediagram contains a combination of logical and physical aspects, meaning that logical elements and physical components both are used in the visualization.

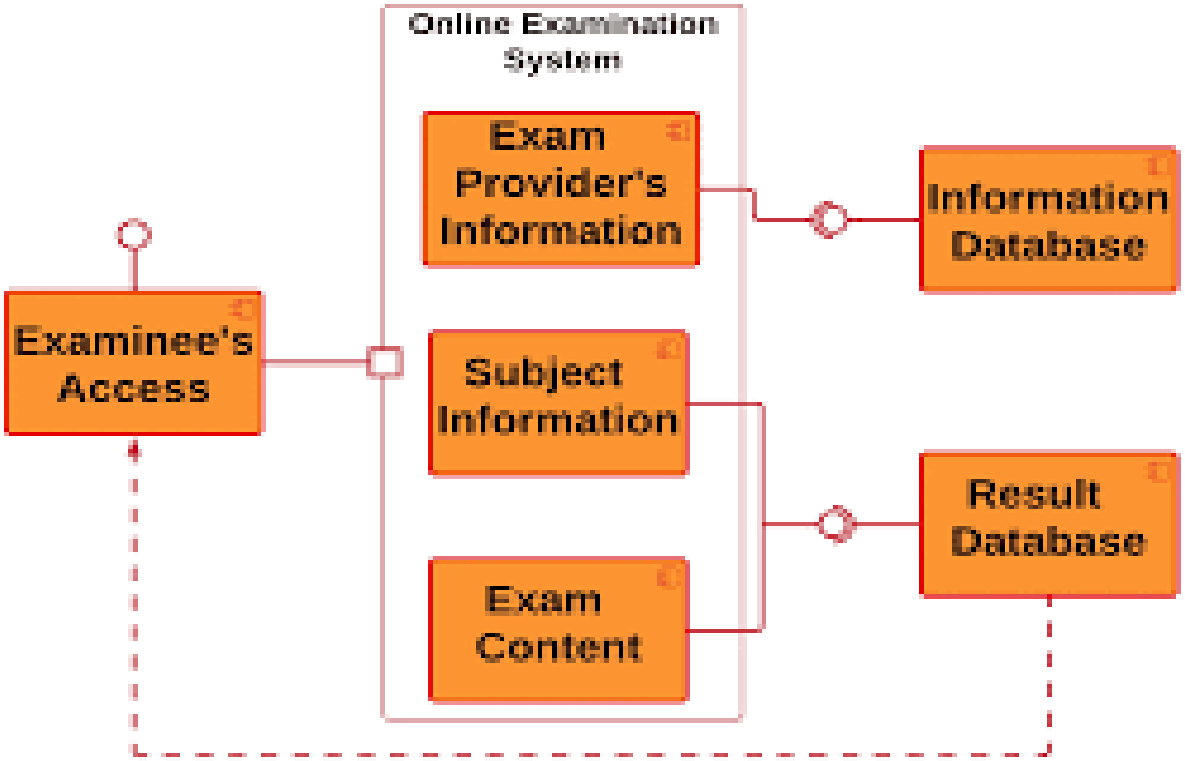
TheDrgon1openEAmethodsuggestseitherseparatingtheselevelsofabstractionin various diagrams orbeing veryclear about which shapes show an element and which show comport.

PRAGATHI DEGREE COLLEGE

5.3. Activity diagram

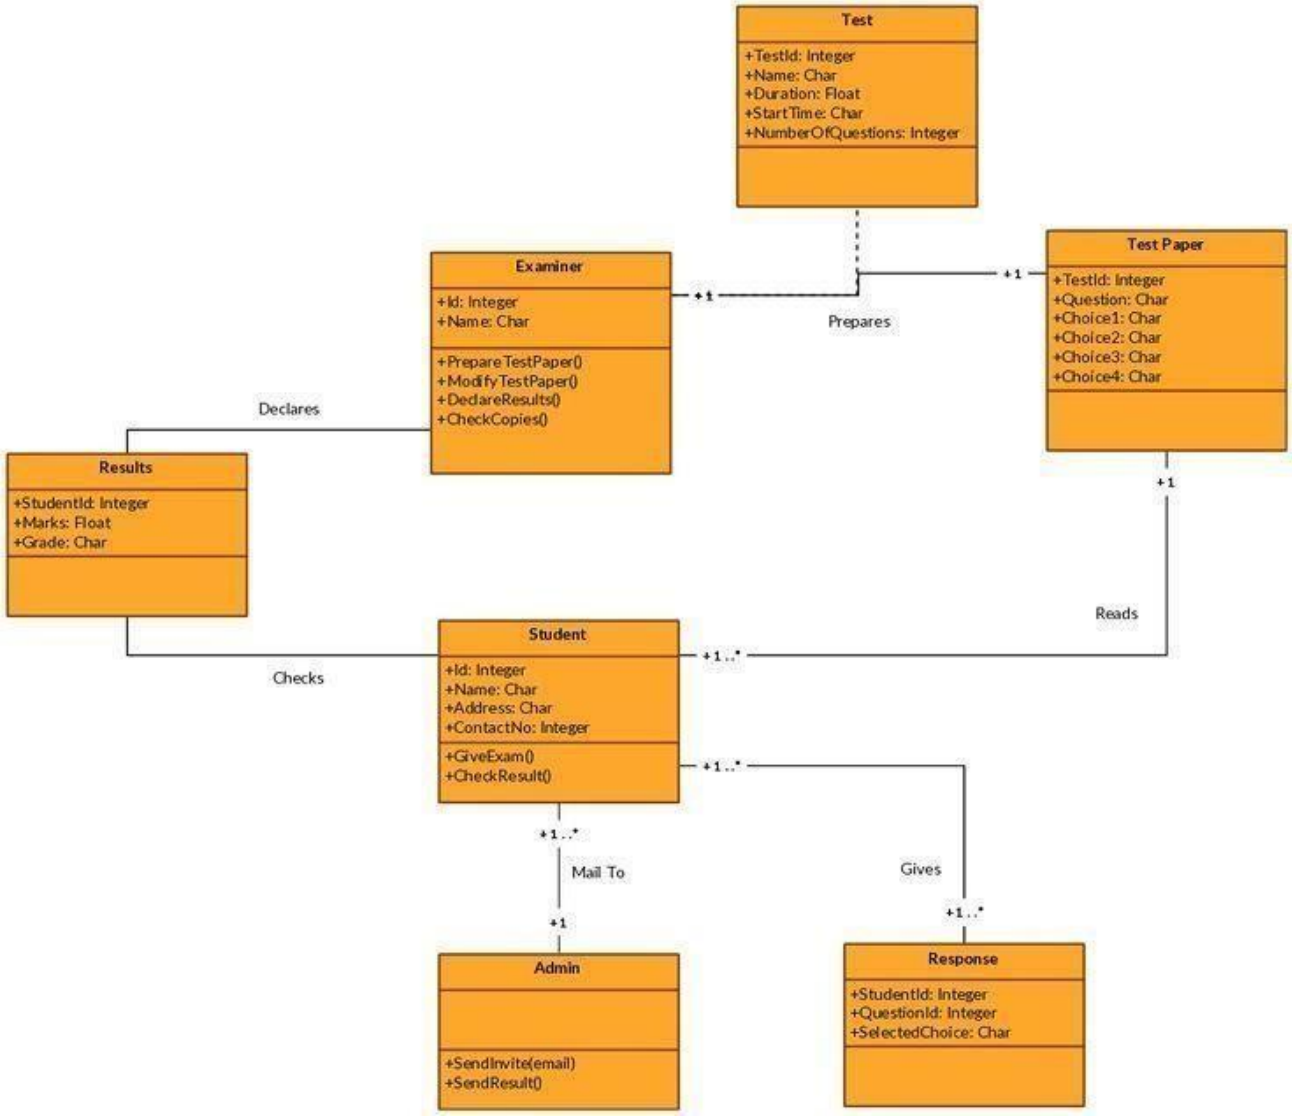
Activity diagram is another important behavioral diagram in UML diagram to describedynamic aspects of the system. Activity diagram is essentially an advanced version of flow chart that modeling the flow from one activity to another activity.

Activity Diagrams describe how activities are coordinated to provide a service which canbe at different levels of abstraction. Typically, an event needs to be achieved by some operations, particularly where the operation is intended to achieve a number of different things that require coordination, or how the events in a single use case relate to one another, in particular, use cases where activities may overlap and require coordination. Itis also suitable for modeling how a collection of use cases coordinate to represent business workflows.



PRA COLLEGE

5.4. Classic Diagram



In here case we have to check the service and then we have to check the particular service and nextyou have to select the service and next if the payment is done you canget track id or you won,,t getthe is whether it is fail payment.

Additionally, the class diagram blueprints show how things in the system work and are related. It also shows the system,,s activities sand the services it provides. Therefore, a class diagram defines the physicalcomponents of a system and can directly relate to object-oriented languages.

PRAGATI

5.5. UML Class Diagram

This simple class diagram for online MAPPING FOOD gives you the exact details about the system,,s classcharacteristics and methods. It also clarifies the connections of classes in the system. Here, I will be showing you the sample constructed class diagram provided with its attributes and methods. This is constructed with the simple idea derived from the common function of online FOOD LOCATIONS.

Frontend design

It issued to denote the who to operate the web site and it in a users understanding format

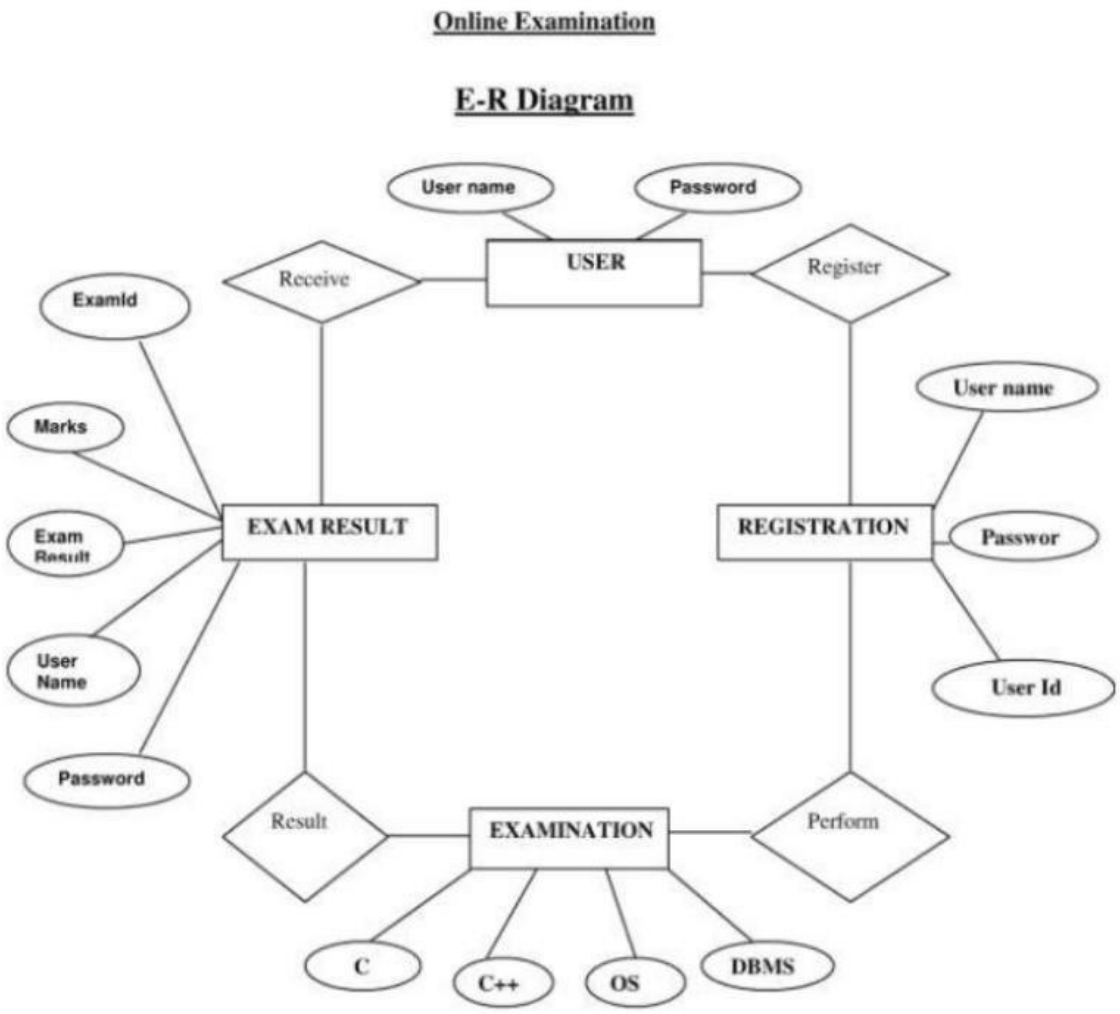
5.6. E R- DIAGRAMS

ER Diagram stands for Entity Relationship Diagram, also known as ERD is a diagram that displays the relationship of entity sets stored in a database. In other words, ER diagrams help to explain the logical structure of databases.



ER diagrams are created based on three basic concepts: entities, attributes andrelationships.

ER Diagrams contain different symbols that use rectangles to represent entities,ovals to define attributes and diamond shapes to represent relationships.

At first look, an ER diagram looks very similar to the flowchart. However, ER Diagram includes many specialized symbols, and its meanings make this modelunique. The purpose of ER Diagram is to represent the entity framework in Francine.

5.7. NORMALISING DATABASE

Customers find this cumbersome. If you decide to violate one of the first three rules of normalization, make sure that your application anticipates any problems that could occur, such as redundant data and inconsistent dependencies. data wastes disk space and creates maintenance problems. If data that exists in more than one place change Redundant is much easier to implement if that data is stored only in the Customers table and nowhere else in the database. What is an "inconsistent dependency"? While it is intuitive for a user to look in the Customers t must be changed, the data must be changed in exactly the same way in all locations. A customer address able for the address of a particular customer, it may not make sense to look there for the salary of the employee who calls on that customer. The employee's salary is related to, or dependent on, the employee and thus should be moved to the Employees table. Inconsistent dependencies can make data difficult to Innogeccks™ Technologies Internship 2023 access because the path to find the data may be missing or broken. There are a few rules for database normalization. Each rule is called a "normal form."If the first rule is observed, the database is said to be in "first normal form." If the first three rules are observed, the database is considered to be in "third normal form." Although other levels of normalization are possible, third normal form is considered the scenarios do not always allow for perfect compliance. In general, normalization requires additional tables and some highest level necessary for most applications. As with many formal rules and specifications, real world over to the Employees table. Inconsistent dependencies can make data difficult to

5.8.1.1. DATABASE INDEXESE

Performance is extremely important in many consumer products like e-commerce, payment systems, gaming, transportation apps, and so on. Although databases are internally optimized through multiple mechanisms to meet their performance requirements in the modern world, a lot depends on the application developer as well

— After all, only a developer knows what queries the application has to perform. Developers who deal with relational databases have used or at least heard about indexing, and it,,s a very common concept in the database world. However, the most important part is to understand what to index & how the indexing is going to boost the query response time. For doing that you need to understand how you are going toquery your database tables. A proper index can be created only when you know exactly what your query & data access patterns look like. In simple terminology, an index maps search keys to corresponding data on disk busing different in-memory & on-disk data structures. Index is used to quicken the search by reducing the number of records to search for. Mostly an index is created on the columns specifiedin the WHERE clause of a query as the database retrieves & filters data from the tables based on those columns. If you don,,t create an index, the database scans all the rows, filters out the matching rows & returns the result. With millions of records,this scan operation may take many seconds& this high response time makes APIs & applications slower & unusable. Let,,s see an example — we will use MySQL with a default in database engine, although concepts explained in this article are more or less same in other database.

7. TEST PLAN

A test plan outlines the approach, scope, and objectives of testing for a system. Here's an example of a test plan for an online survey system:

1. Introduction:
   - Purpose: The purpose of this test plan is to ensure the quality and functionality of the online survey system.
   - Scope: The test plan covers the testing of all core features and functionalities of the online survey system.
   - Objectives: The objectives of testing include verifying the system's usability, functionality, performance, security, and compatibility.

2. Test Approach:
   - Testing Levels: The system will undergo various levels of testing, including unit testing, integration testing, system testing, and acceptance testing.
   - Testing Types: The testing will include functional testing, usability testing, performance testing, security testing, and compatibility testing.
   - Test Environment: Specify the hardware, software, and network configurations required for testing.

3. Test Deliverables:
   - List the documents and artifacts that will be produced as part of the testing process, such as test cases, test scripts, test data, and test reports.

4. Test Scope:
   - Features to be Tested: Provide a list of all features and functionalities that will be tested, such as survey creation, response submission, result generation, data analysis, etc.
   - Features not to be Tested: Specify any features or functionalities that will not be tested.

5. Test Schedule:
   - Define the timeline for each testing phase, including start and end dates, milestones, and dependencies.

6. Test Environment:
   - Specify the hardware, software, and network configurations required for testing, including the supported browsers and operating systems.

7. Test Cases:
   - Identify and document the test cases that will be executed during the testing process. Include test case ID, description, steps, expected results, and actual results.

8. Test Execution:
   - Define the process for executing the test cases, including test data preparation, test environment setup, and test execution.

9. Defect Management:
   - Describe the process for reporting, tracking, and managing defects encountered during testing. Include guidelines for severity and priority classification.

10. Test Reporting:
   - Define the format and frequency of test reports, including the metrics and measurements to be included.

PRAGATHI DEGREE COLLEGE

11. Risk and Mitigation:
    - Identify potential risks and provide mitigation strategies to address them, such as contingency plans or alternative approaches.

12. Acceptance Criteria:
    - Specify the criteria that need to be met for the system to be considered acceptable and ready for production.

13. Sign-Off:
    - Outline the criteria and process for obtaining sign-off from stakeholders or clients, indicating the successful completion of testing.

This is a general outline for a test plan for an online survey system. You can customize and expand it further based on your specific project requirements and testing needs.

7. Deployment phase

he deployment phase is the final phase of the software development life cycle (SDLC)and puts theproduct into production. After the project team tests the product and the product passes each testing phase,the product is ready to go live. This means that the product is ready to be used in a real environment by allend users of the product. There are various phases of the deployment process the project team must followto ensure the code and technology deploy appropriately. The phases include deploymentpreparation and procedures, product deployment, transferring ownership of the product, and closing the deployment phase.Let's learn about each phase in more detail.

7.1. INTERNAL DEPLOYMENT:

Internal dose means that portion of the dose equivalent received from radioactive ma- terial taken into the body. Internal floating roof means a cover or roof in a fixed-roof tank that rests upon or is floated upon, the liquid being contained, and is equipped witha closure seal or seals to close the space between the roof edge and the tank shell. ex- ternal company means a foreign company that is carrying on business, or non-profit activities, as the case may be, within the Republic, subject to section 23(2); internal waters means any navigable river or waterway within the State of California. Internal Restructuring shall have the meaning set forth in Section 7.02(f) of this Agreement.

Automated external defibrillator or ―AED‖ means an external semiautomatic device that determines whether defibrillation is required. Internal control means a process ef- fected by those charged with governance, management, and other personnel, designed to provide reasonable assurance regarding the achievement of objectives in the follow-ing categories: External beam radiation therapy means therapeutic irradiation in which the source of radiation is at a distance from the body. Internal Distribution has the meaning set forth in the recitals here of

Internal Purposes for Vulnerability Intelligence Manager means assisting with the identification, management and/or remediation of vulnerabilities in applications deployed or to be deployed within Licensee,,s own systems. Internal Reorganization means any reorganization between or among the Borrower and any Subsidiary or Subsidiaries or between or among any Subsidiary and oneor more other Subsidiaries or any combination thereof by way of liquidations, mergers, consolidations, conveyances, assignments, sales,

transfers and other dispositions of all or substantially all of the assets of a Subsidiary (whether in one transaction series of transactions); provided that (a) the Borrower shall preserve and maintain its status as a validly existing corporation and (b) all assets, liabilities, obligations and guarantees of any Subsidiary party to such reorganization will continue to be held by such Subsidiary or be assumed by the Borrower or a Wholly-Owned Subsidiary of the Borrower. External Directors means directors appointed and serving in accordance with Sections 239 through 249 of the Companies Law. Internal combustion engine or _engine,, means an energy converter, other than a gas turbine, designed to transform chemical energy (input) into mechanical energy (output) with an internal combustion process; it includes, where they have been installed, the emission control system and the communication interface (hardware and messages) between the engine's electronic control unit(s) and any other power train or non-road mobile Innogeccks™ Technologies Internship 2023 machinery control unit necessary to comply with Chapters II and III; Internal audit means an independent appraisal activity established within a state agency as a control system to examine and evaluate the adequacy and effectiveness of other internal control systems within the agency. Internal Use means use of the Licensed Property by employees of Customer in Customer,,s internal operations but does not include access of the Licensed Property by, or use of the Licensed Property in the provisions of services to,

Customer,,s clients or customers. Internal Use also includes use of the Licensed Property by contractors of Customer, including contractors providing outsourcing or hosting services, as long as Customer assumes full responsibility for the compliance with this Agreement in such use. Use of the Licensed Property (or any part thereof) for the benefit of others, whether by means of a software as a service offering, service bureau application, application service provider, outsourcing or other means

PRAGATHI DEGREE COLLEGE

of providing service to any third party shall not be considered Internal Use. External dose means that portion of the dose equivalent received from any source of radiation outside the body. Internal appeal means a review by an insurer of an adverse benefit determination made Internal Systems means the Software and Documentation and the computer
communications and network systems (both desktop and enterprise wide), laboratory equipment, reagents, materials and test, calibration and measurement apparatus used by the Company or any Subsidiary in their business or operations or to develop, manufacture, fabricate, assemble, provide, distribute, support, maintain or test
the Customer Offerings, whether located on the premises of the Company or any Subsidiary or hosted at a third party site

External floating roof means a storage vessel cover in an open tank top consisting of a double deck or pontoon single deck which rests upon and is supported by the petroleum liquid being contained and is equipped with a closure seal or seals to close the space between the roof edge and tank shell. external borders means external borders as defined in point 2 of Article 2 of Regulation (EU) 2016/399; Deployment means a period of time extending from six (6) months before a member of the uniformed services' departure from their home station on military orders through six (6) months after re- turn to his or her home station.
Internal Collaboration means collaborative arrangements within a group of companies or within various strategic business. units/sub- sidiaries/operating divisions in order to gain a strategic position whilst sharing re- sources, profits and losses as well as risks Internal Control Event means a material weakness in, or fraud that involves management or other employees who have a significant role in, the Borrower,,s internal controls over financial reporting, in each caseas described in the Securities Laws. Internal Auditor means the person employed or engaged by the Corporation to perform the internal audit function of the Corporation; Internal Market Buyer means a Market Buyer making purchases of energy from the PJM Interchange Energy Market for ultimate consumption by end-users inside the PJM Region that are served by Network Transmission Service
Manager means eit. Exernal her of the following: (1) A person machinery control unit necessary to comply with Chapters II and III; Internal audit means an independentappraisal activity established within a state agency as a control system to examine and evaluate the adequacy and effectiveness of other internal control systems within the agency.

Internal Use means use ofthe Licensed Property by employees of Customer in Customer,,s internal operations but does not include access of the Licensed Property by, or use of the Licensed Property in the provisions of services to, Customer,,s clients or customers. Internal Use also includes use of the Licensed Property by contractors of who is seeking to be, or is, retained by a Customer,

8. Conclusion

In conclusion, our web-based online examination system provides a reliable and efficient solution for conducting exams and assessments remotely. With a user-friendly interface and robust features, our system offers a seamless experience for both administrators and test-takers.

By leveraging our online examination system, educational institutions, businesses, and certification bodies can transition from traditional paper-based exams to a digital platform. This shift eliminates the constraints of physical test centers and allows for greater flexibility in scheduling and participation.

Our system ensures the integrity and security of exams through various mechanisms, such as randomized question selection, time limits, and secure user authentication. This helps prevent cheating and ensures that the results accurately reflect a candidate's knowledge and abilities.

Test-takers benefit from the convenience of taking exams remotely, eliminating the need for travel and providing flexibility in choosing the time and location for their assessments. The system provides immediate feedback and auto-grading capabilities, allowing participants to receive their results promptly.

Administrators can efficiently manage exams by creating question banks, defining exam parameters, and monitoring test sessions. The system offers comprehensive reporting and analytics tools, enabling administrators to gain insights into exam performance, identify trends, and make data-driven decisions for continuous improvement.

Furthermore, our web-based online examination system reduces administrative overhead by automating various processes, such as exam scheduling, result generation, and data management. This frees up valuable time and resources, allowing administrators to focus on other critical tasks.

We prioritize data security and privacy, implementing robust measures to protect exam data from unauthorized access or tampering. Our system adheres to industry best practices and complies with relevant regulations to ensure the confidentiality and integrity of sensitive information.

With our web-based online examination system, institutions and organizations can streamline their assessment processes, improve efficiency, and enhance the overall experience for both administrators and test-takers. Embracing digital assessments empowers organizations to adapt to the modern learning and testing landscape while maintaining high standards and accuracy.
